BLEEDING UNDER CONTROL.

PCC for treatment of bleeding and perioperative prophylaxis of bleeding

- Highly effective
  - Good haemostatic balance of coagulation factors and inhibitors
- Fast onset of action
  - < 10 minutes
- High tolerability
  - Minimal activation of coagulation factors and therapeutic concentrations of protein C and protein S

octapharma® is a virus inactivated prothrombin complex concentrate (PCC). It is used for perioperative prophylaxis and treatment of bleeding in hereditary or acquired deficiency of the prothrombin complex coagulation factors, such as deficiency caused by treatment with vitamin K antagonists. Octaplex® contains the coagulation factors II, VII, IX and X as well as the inhibitor protein C and its cofactor protein S. Freeze-dried powder, to be dissolved in 20 ml of water for injection. Shelf-life: 2 years at 2 - 25 ºC.
